

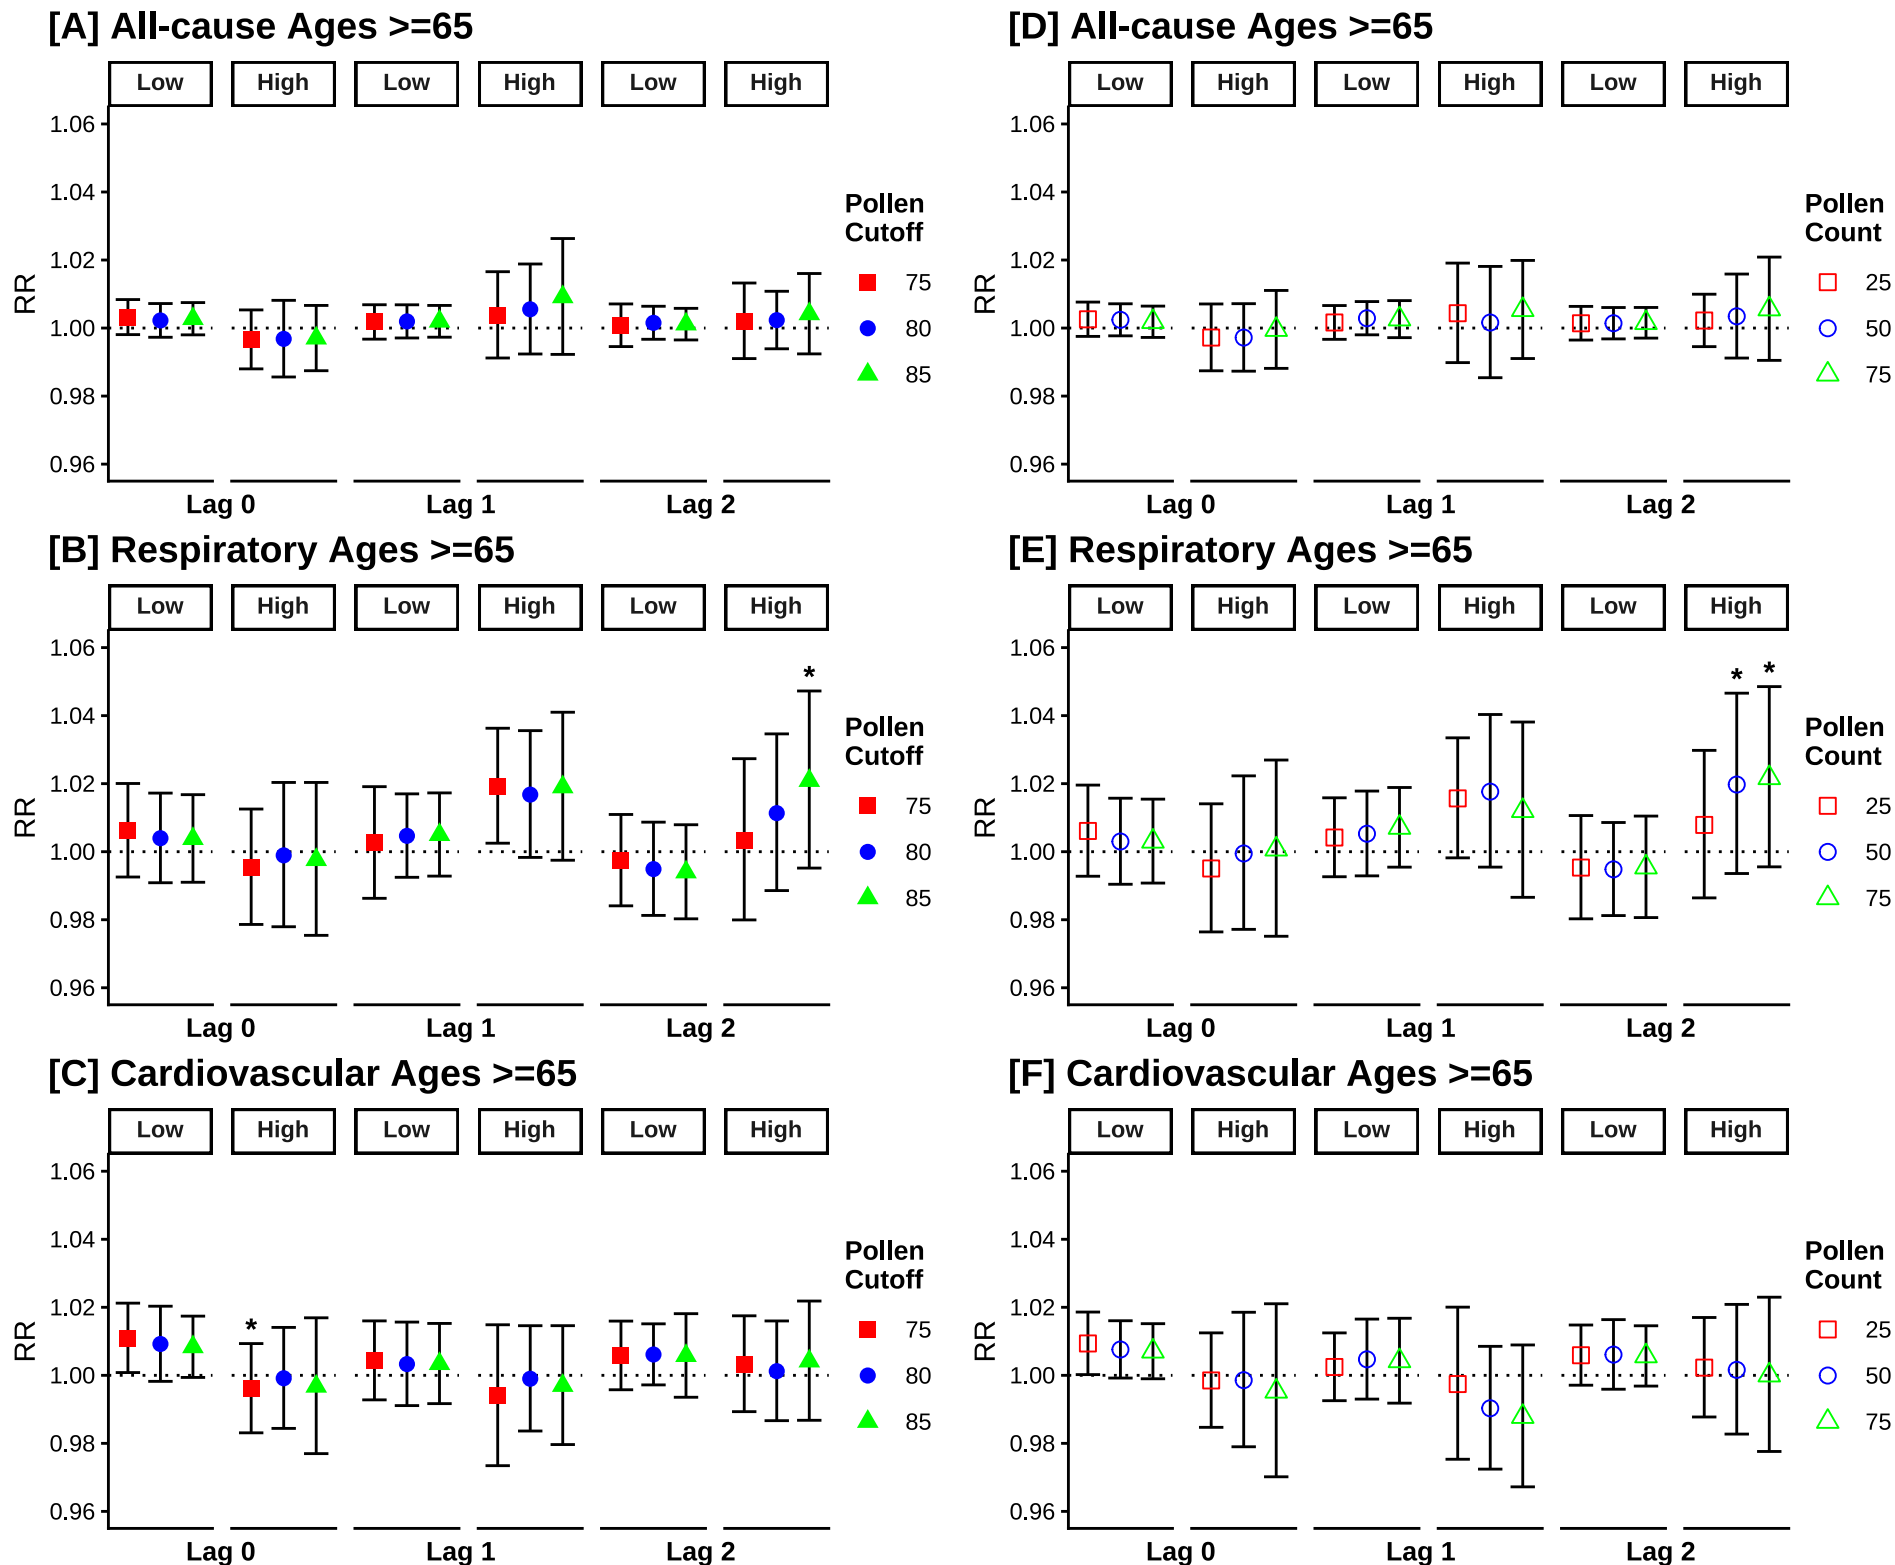

Figure S3. Association between SPM and all-cause, respiratory and cardiovascular mortality of ages 65 and above by quantiles (low or high) determined by levels of pollen cutoffs (75th, 80th, 85th) and count (25, 50, 75 grains per cm²) during the spring months (February to April) from 1989 to 2014. RR on the y-axis is defined as the relative risk per interquartile range mean (IQR) increase. Results are pooled from random-effects meta-analysis.
